## **DETAILED ACTION**

### ***Formal Matters***

Claims 1-2, 4-9, 33-41, 60-67 are pending and under consideration.

### ***Response to Amendment***

The rejection of claims 33-41 under 35 USC 112 first paragraph as lacking enablement has been obviated by Applicant's amendment and is thus withdrawn.

The rejection of claims 1-9, 33-41 under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention, has been obviated by Applicant's amendment and is thus withdrawn.

New issues are set forth below.

### ***Claim Rejections - 35 USC § 112 first paragraph***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 33-41 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The claims are drawn to a method for identifying a therapeutic agent in a mammal wherein the mammal comprises a mutation, disruption or insertion in the CAR allele. Applicant has provided little or no guidance to enable one of ordinary skill in the art to determine, without

Art Unit: 1646

undue experimentation, the positions in the CAR allele which will disrupt function of the encoded CAR protein (e.g. such as by amino acid substitutions or deletions), and the nature and extent of changes that can be made in these positions. Although the specification outlines art-recognized procedures for producing and screening for muteins, this is not adequate guidance as to the nature of active derivatives that may be constructed, but is merely an invitation to the artisan to use the current invention as a starting point for further experimentation. Applicants do not disclose any actual or prophetic examples on expected performance parameters of any of the possible muteins of CAR allele. Due to the large quantity of experimentation necessary to generate the number of variants recited in the claims and possibly screen same for activity, the lack of direction/guidance presented in the specification regarding which structural features are required in order to provide activity, the absence of working examples directed to same, the complex nature of the invention, the state of the prior art which establishes the unpredictability of the effects of mutation on encoded protein structure and function, and the breadth of the claims which fail to recite any structural or functional limitations, undue experimentation would be required of the skilled artisan to make and/or use the claimed invention in its full scope.

### ***Conclusion***

Claims 1-2, 4-9, 60-67 are allowable.

Claims 33-41 are rejected.

Art Unit: 1646
